XML WebHelp

Publish DITA and DocBook Content to WebHelp Output

Oxygen WebHelp for DITA and DocBook

Oxygen offers support for transforming DITA and DocBook resources into WebHelp output. WebHelp consists of a series of HTML pages, neatly integrated into a system that offers table of contents, index navigation, text search capabilities, and various delivery formats (including feedback-enabled systems).

A WebHelp system is the result of running a transformation scenario. However, if you require an automated process that produces the WebHelp output, the same result can be obtained by running the transformation inside Oxygen XML WebHelp Plugin, which is a command-line interface application that requires its own license key.

Interested in generating both WebHelp Responsive and PDF output from DITA content?
Check out our **Oxygen Publishing Engine** bundle that includes **WebHelp** and **Chemistry**

WebHelp Responsive for DITA

Publishing Templates

The layout of the WebHelp Responsive system is platform independent and is highly customizable. You can select from several different styles of layouts and each of these layouts include a collection of skins that you can choose from, or you can even customize your own.

Integration with the Oxygen Feedback Commenting Component

The layout of the WebHelp Responsive system is platform independent and is highly customizable. You can select from several different styles of layouts and each of these layouts include a collection of skins that you can choose from, or you can even customize your own.

Manage Comments Directly in Oxygen XML Editor/Author

An add-on is also available that contributes a Feedback Comments Manager view in Oxygen XML Editor/ Author. Now, your documentation team can see all the comments added in your WebHelp output in order to make corrections and update the source content without leaving the application.

WebHelp Classic for DocBook

Single-Source Publishing

You can transform DocBook documents into three types of WebHelp systems:

- Desktop WebHelp
- WebHelp for mobile devices, supported over multiple platforms
- Integration with the Oxygen Feedback Commenting Component

WebHelp Classic for Desktop

The WebHelp Classic system is designed for desktop systems. You can use the system to publish DocBook documents and Oxygen includes predefined transformation scenarios to make it a single-source publishing solution.

WebHelp Classic for Mobile Devices

To further improve its ability to create online documentation, Oxygen offers support to transform DocBook documents into mobile WebHelp systems. This feature generates an output that works on multiple platforms (Android, iOS, BlackBerry, Windows Mobile) and is specially designed for mobile devices.
