## A meeting of minds

There are 86 billion neurons in the human brain. Artificial Intelligence can't replace that complexity, but the application of AI in XTM Cloud increases automation and helps to produce higher quality translations more quickly.

**XTM Cloud's** smart automation frees the linguist from repetitive tasks, enabling them to use human brainpower for maximum benefit.

**Inter-language Vector Space (ILVS)** is an AI algorithm that calculates machine translation accuracy more precisely than any other comparable tool.

**Multi-element Translation Analysis (META)** auto-calculates word alignments to unlock swifter, more accurate and more profitable communication.

XTM's proprietary AI applications deliver game-changing results and enable smart, informed decision making.

**Process**

vast amounts  
of data

**Extract**

meaning and create  
multilingual assets

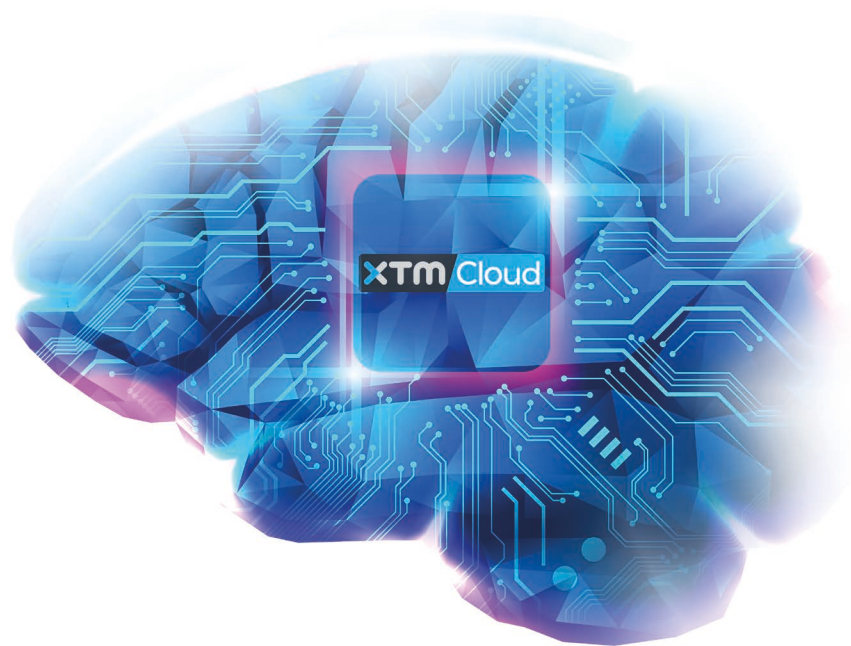

**Accelerate**

communication and time  
to market

**XTM Cloud** is the enterprise translation management system.

It helps you combine the best language technology with unshackled human ingenuity.

**XTM Cloud enables a meeting of minds.**
