Crafting user experience
Harvesting growth
TIM 4.8

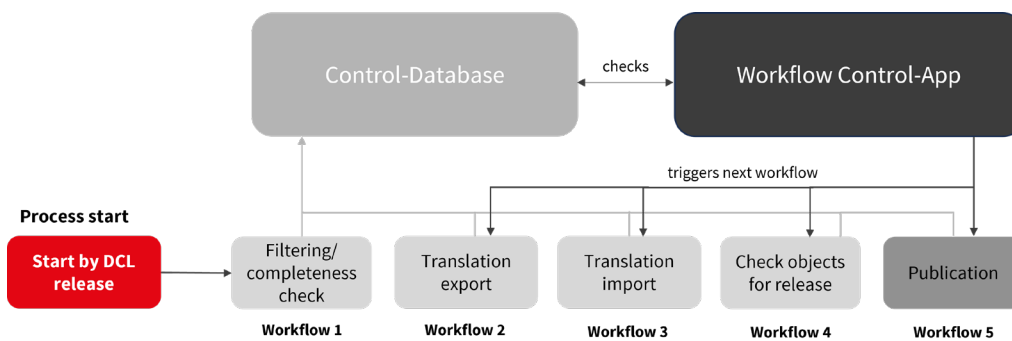

tim

The content management system for digital
technical documentation

Full automation — End-to-end process automation from release to publication

- ✓ Significant time savings due to end-to-end automation from release onwards
- ✓ Quality improvement through automated, rule-based and server-side publication
- ✓ Flexibility through manual start and special publications
- ✓ Transparency through the control database and e-mail notifications

Connecting PIM data to Content Delivery — Product and usage information in one place

- ✓ Information from TIM and PIM is visible at a glance
- ✓ All product information can be found according to the product hierarchy
- ✓ Supplementation of topic-based information collections from TIM (HTML, PDF, iiRDS packages) with PIM data
- ✓ Linking TIM and PIM data via article master data with the help of the intelligent information platform Sherlock®

Other new features in TIM 4.8

- ✓ The Web XML Editor is a browser-based way to capture information
- ✓ The new variant assignment dialog (HTML) replaces the existing TIM InfoManager dialog and saves time through intuitive operation and a modern design
- ✓ Easy entry for more clarity and productivity with the structure tree in the Review Service
- ✓ Content generation based on external content not maintained in TIM through new generation nodes
