Noxum Smart Techdoc Solution powered by NovaDB
The lean, web-based editing system for technical documentation

Professional creation, management and publication of technical documentation with low investment risk for small and medium-sized companies and their technical editorial teams.

Noxum provides its professional editorial system in a SaaS offering that is specially tailored to small and medium-sized companies. A web interface provides the tools for creating editorial content. The consistent SaaS approach and the browser-based interface enable fast and cost-effective system implementation, while at the same time providing a clear path to agile, project-specific expansion of the functionalities. A wide selection of languages, output formats and interfaces is part of the system's basic equipment.

Less work for your IT

The web editing system can be easily integrated into existing IT system landscapes with third-party systems. Thanks to the software-as-a-service approach, there are no additional hardware and software procurement and maintenance costs. As a web-assisted application, your IT does not have to carry out any complex installations.

Distributed work at different locations

Noxum Smart Techdoc Solution is suitable for editorial teams with distributed locations and external service providers. Together they achieve their major goal: consistent technical documentation with structured content in different languages, output formats and output channels.
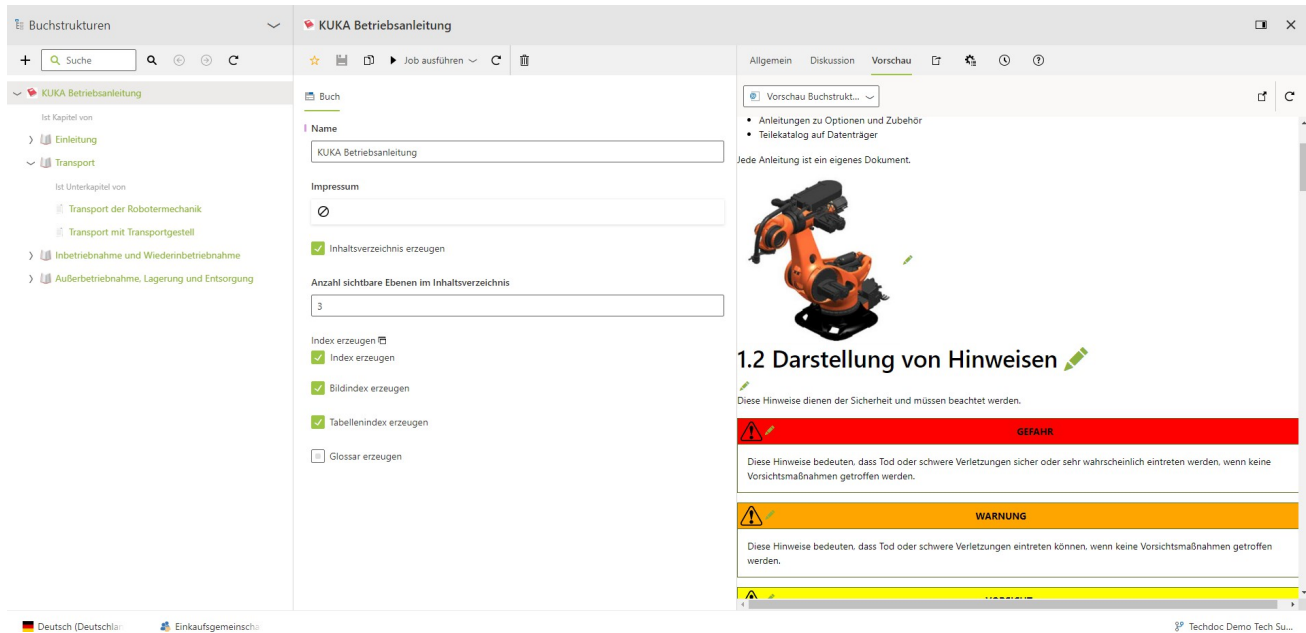

The solution that adapts to your requirements:

- Excel plugin for mass data maintenance with Microsoft Excel
- Interface to Adobe Indesign
- Classification according to standards such as ECLASS or ETIM
- Recording and structuring of product data, e.g. for technical documentation, catalogs, data sheets, etc.

Noxum Smart Techdoc Solution powered by NovaDB

Smart Techdoc Solution is based on our no-code/low-code online platform NovaDB. NovaDB is configurable in such a way that it can manage almost any type of content, e.g. product information, media content and/or web content. Depending on the configuration, it can be used for a wide variety of purposes, for example as a data hub in the PIM area, for help desks and special requirements for digitization in companies.

Clear preview of the publications created. After the browser-based creation of all content such as texts, meta and product data, all publications are available as a preview in the browser at the click of a mouse - in all languages for all markets.

PERFORMANCE FEATURES AND BENEFITS

- Workflow, role and rights management
- Version and variant management
- Scalability through MACH concept
- Relief from IT
- Reuse of content

- Designed for small and medium-sized technical editorial offices
- Support for work at distributed locations
- Single Source Publishing
- Translation management
