XTM Cloud 13: The Pathfinder Release

The newest version of our translation management system is not only more powerful, it also makes it easier for all XTM users to harness that power. Take control of your globalization journey, reduce translation time and costs, and deliver high-quality localized content with XTM Cloud 13.

Communication Reinvented with XTM's new Query Management Module
Create, access and manage all your conversations within your TMS, getting answers quickly to avoid rework, mistranslations and additional costs.

Let DeepL provide accurate localization
DeepL glossaries and formality features are now supported, ensuring that the right terms are used and that on-brand, accurate content is produced.
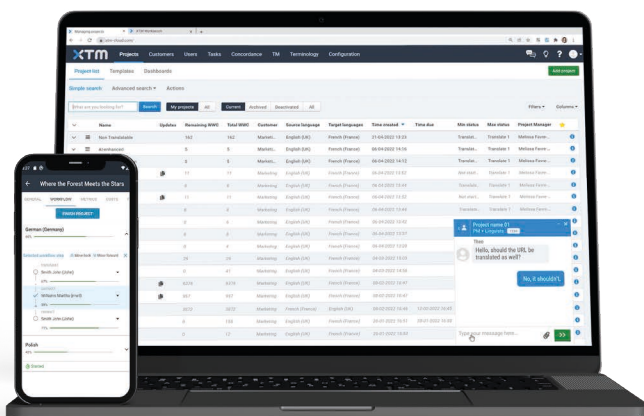

Harness advanced AI functionality for more accurate translations
Our breakthrough NLP-driven algorithm for translation matching, Weighted Token Levenshtein, has been enhanced to **leverage up to 25% more TM matches**.

Enable linguists to focus on translation and let AI do the rest
Our improved auto inline feature leverages new XTM Cognitive Linguistic AI advancements to **ensure placement of inline tags is 73% accurate**.

Get more from Machine Translation with AI-enhanced TM technology
The alliance between TM and Machine Translation delivers the best matches possible as fuzzy matches coming from the TM are now directly sent and leveraged by SYSTRAN.
