Fulfill
the wishes
of your customers.

**Simply create all the information about
your products and make them digitally usable.**

tim

The editorial system for
digital technical documentation

Document smart with intelligent information

With the TIM editorial system, you can create technical content quickly and easily and distribute it as needed without additional effort. It makes no difference to you whether you use it to generate a manual or a single action step on a machine display or an app. In this way, you meet the information needs of your customers every time.

Provide your customers with pinpoint information

It has never been easier to answer your users' specific questions: Thanks to clearly findable information modules and end-to-end digital editing processes, TIM can provide requested detailed information at the push of a button. TIM's flexible and adaptable metadata concept makes it possible.

Deliver customized information for customized products

Numerous automation options such as variant filtering or filtering based on order files up to batch size 1 ensure that you can provide individual documents at the push of a button and thus react quickly to changes in the market.

Use modern communication channels and media

Gain an advantage over your competition by making the technical documentation of your products attractive. With TIM, you can easily integrate multimedia content such as videos, QR codes, graphics, VR or AR data into your documentation.

Upgrade your role

Go from technical writer to information manager and share your valuable information across the enterprise.

Of course, TIM also fulfills all the tasks of a classic editorial system:

- ✓ Finding instead of searching thanks to metadata and the Context Manager
- ✓ Optimized reuse
- ✓ Simple and fast change management
- ✓ Powerful and comprehensive variant and variable management
- ✓ Automatic versioning
- ✓ Powerful TIM authoring support
- ✓ Layout-neutral writing with automatic formatting using publication templates

- ✓ Automatic test functions
- ✓ System-supported release process
- ✓ Integrated DMS and MAM system, e.g. for Integration and management of supplier documents
- ✓ Increased legal certainty through system-controlled processes and predefined warnings
- ✓ Convenient translation management
- ✓ Demand-driven publication via a wide variety of channels from one data source
