iiRDS
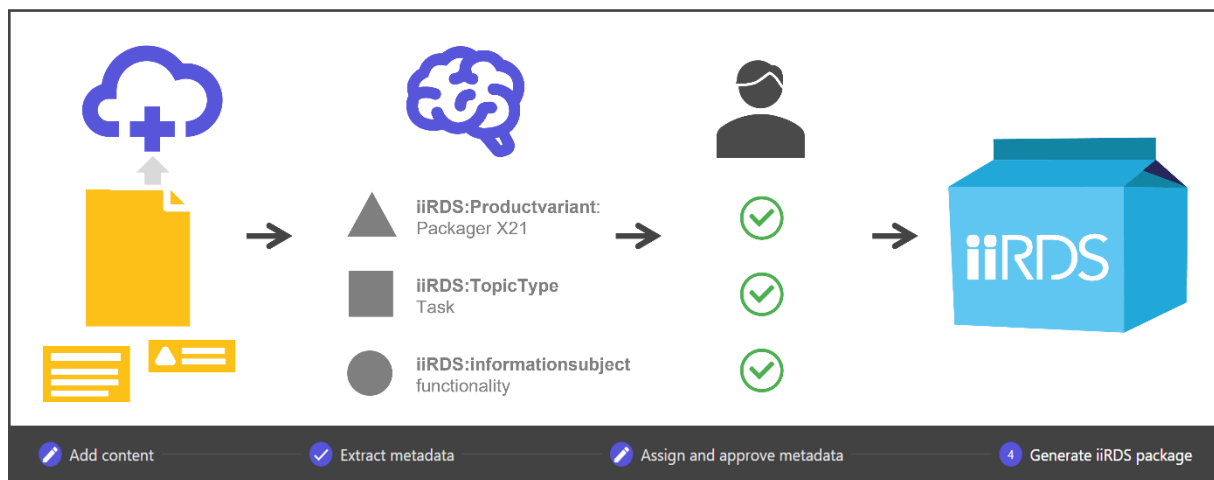

Use case

Intuitive to intelligent information

You have a huge pile of documents and don't know how to deliver them as iiRDS packages? With plusmeta® you can do it in no time!

In 4 steps to the finished iiRDS package:

1. You upload your documents, topics or fragments to plusmeta.
2. Our AI recognizes metadata and maps existing metadata to iiRDS concepts.
3. All you have to do is check and approve the recognized metadata.
4. plusmeta generates an iiRDS package with your content and metadata.

All the standard metadata are supported:

- ✓ Full support of iiRDS 1.1
- ✓ Analyze and compile fragments, topics and documents.
- ✓ Support for complex identities, content lifecycle phases and folders.

Your advantages at a glance:

- Processing of structured and unstructured content, e.g. supplier PDFs, HTML, etc.
- Transfer of existing metadata, e.g. from your Content Management System.
- Recognition of iiRDS metadata by our AI.
- Automatic generation of valid iiRDS packages at the push of a button.
- Direct data exchange with content delivery portals via iiRDS.
